MONIL®-FLOC SB

Flocculation agent for swimming pool water

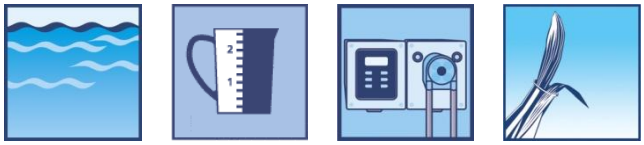
Item no. 4734

MONIL®-FLOC SB is the well proven quick flocculation agent for swimming pools with sand filters

- universally suitable for all sand filter systems,
- compatible with chlorine, bromine and other germ-killing procedures,
- suitable for full-automatic control and dosing systems.

MONIL®-FLOC SB provides clear water and flawless looks

- binds finely dispersed impurities,
- reliably removes turbid water,
- does not affect the regeneration of sand filters.



Areas of application, mode of action and recommended dilution:

MONIL®-FLOC SB is suitable for all swimming pools with fullautomatic control and dosing systems, e.g. in hotels, housing estates and municipal businesses.
MONIL®-FLOC SB binds finely dispersed impurities (e.g. cosmetics), which can be removed in this way from the water via filtration unit. The result is sparkling and crystal clear water.
Apply MONIL®-FLOC SB by dosing automatically direct before or after the circulating pump of the filtration unit at a place with high turbulence.
For long-lasting clear water, a dosage between 0.1 – 1.0 ml per m^3 of circulated pool water is sufficient.

For disinfecting pool water, we recommend the ready to use water disinfectant concentrate CHLORO-DES (Item no. 4740).
The HWR-products MONIL®-PLUS (art. 4730) and MONIL®-MINUS (Item no. 4732) are well suited to adjust the pH-value to the ideal range.

Characterisation:
Appearance:
Colourless scentless liquid.
Ingredients:
Preparation based on polyaluminium chlorides in water.
pH value:
Acidic.

This product data sheet has been created according to the most current standard of technology. We do however not guarantee for correctness and completeness. No liability for damages due to improper application. update July 2015
