

## Aqua-Push

Humidity penetrating agent,  
contacting agent

Item no. 5040

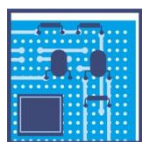

**AQUA-PUSH**, the protection film for electronic devices and equipment

- penetrates existing humidity,
- behaves electrically neutral,
- and protects from corrosion and short-circuits.

**AQUA-PUSH** is used where reliability under humid conditions is necessary:

- in ignition systems, in switch cabinets, electro motors,
- in electric plugs, cable connections and machines,
- for radio, tv and communication devices.

### Areas of application:

Spray AQUA-PUSH area-wide on electronic components, which have to be protected. Heavily soiled systems (e.g. ignition systems) have to be cleaned and checked before applying. The protection film should be renewed according to circumstances at regular intervals.

AQUA-PUSH is not compatible with all kind of synthetic materials. In case of doubt, check compatibility on an area, which is not visible. Flammable vapour-air mixtures may be formed due to the aerosol propellant and the solvents. During spraying in closed rooms, take care of good ventilation. Do not smoke. Do not spray on hot surfaces.

### Characterisation:

#### Appearance:

Yellow liquid with a smell of ether.

#### Ingredients:

Preparation from mineral oils and ethereal solvents.
