

KORPHOS

Rust remover

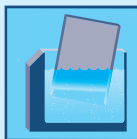

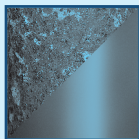

Item no. 4220

KORPHOS

- is the powerful rust remover for industrial use
- dissolves rust, lime and other mineral deposits
- removes fats, oils and waxes thanks to coordinated ingredients

KORPHOS

- works reliably on corroded steel, stainless steel and iron parts
- leaves completely degreased surfaces
- is used wherever rust formation has to be prevented

Areas of application and recommended dilution:

1 : 3 Immersion bath

Dilute KORPHOS and dip the related parts in the immersion bath. Depending on the corrosion category, let it act for a few minutes up to several hours. Treat residues with a scrubber or, if necessary, repeat the procedure until the last residues are removed. To avoid the formation of rust film, do not rinse the parts with fresh water. Otherwise the clean parts should be treated at once with stainless steel care MULTI-TRENN S (item no. 5100) after rinsing and drying.

Wiping or spraying method

Apply the diluted product on corroded areas, let it act for a few minutes and proceed as described above.

Chemical characterisation:

Appearance:

Yellow liquid with a scent of alcohol.

Ingredients:

Preparation from surfactants, alcohols, inorganic acid, corrosion inhibitors and auxiliaries in water.

All surfactants are biologically degradable.

Free of AOX, hydrochloric acid and oxalic acid.

pH value:

√-0: strongly acidic
