

ALGEN-EX

Liquid algicide

Item no. 4710

ALGEN-EX

- is ideal to effectively annihilate and prevent algae
- is used in car wash facilities and many other water cycling systems
- is also used in swimming pools, fountains and decoration fountains

ALGEN-EX

- is skin-friendly, pH-neutral and gentle to materials
- can be combined with other water additives such as chlorine or peroxide
- ensures economical chlorine consumption in the swimming pool

Areas of application and recommended dilution:

Up to 1:100.000

Algae prevention

After thorough cleaning (we recommend **MONIL®-WH**, item no. 4300), add 60 ml/m³ to the water cycle when refilling with fresh water. Add weakly 10-15 ml/m³ for continuous dosing. With significant organic contamination (from plants/animals) and UV radiation we recommend to add **WAPO 35 biozid** (item no. 4746): 250-2500 ml/m³ initially and 175-875 ml/m³ per week, depending on organic contamination.

When you fill in new water, because of evaporation or through back-rinsing of the filter, do not forget to add **ALGEN-EX** quantity-based. This is also valid, if the water cycling system is being diluted with rain.

1:5.000 – 1:10.000

Algae annihilation

Apply a shock treatment with 100-200 ml/m³. If necessary, remove dead algae manually.

Do not use for objects with drinking-water, fish or plants!

Chemical characterisation:

Appearance:

Colourless liquid with a mild odour.

Ingredients:

Preparation from cationic polymers and auxiliaries in water.

Free of acids, alkalis, chlorine, dye and heavy metals.

pH value:

8.0: neutral ↴

Use biocides safely. Always read the label and product information before use.
